

Through our ongoing commitment to R&D, we are constantly advancing our processing capabilities to address the latest imaging challenges worldwide. With our experienced technical team, our clients can gain significantly greater value from their seismic data while reducing the risk and cost of exploration and production.

- For 2D or 3D data acquired offshore or on land, our advanced imaging services include:
- Pre-stack time migration (PreSTM)
- Pre-stack depth migration (PreSDM)
- Reverse time migration (RTM)
- Velocity model building
- Real-time Model Morphing and Migration (RTM3)
- Tomography
- Waveform Inversion (WFI)
- Azimuthal anisotropy
- AVO/Inversion
- 4D
- Offset vector tiling (OVT)
